# PERMA-LINE
## ROOF EDGE PROTECTION

## BASIC USE

The Perma-Line System can greatly reduce the cost of an entire rood installation by visually predicting the non-serviceable areas of your rood and creating controlled access zones.

## DESCRIPTION

Perma-Line is a cost effective, permanent visual warning line system for rood edge protection and controlled access zones. Once in place, the Perma-Line remains intact until you want to move it. No drilling is necessary for installation, preserving the integrity of your roof. The Perma-Line system consists of powder coated/galvanized metal flags that are adhered to vinyl coated/galvanized aircraft cable. The flag assembly meets OSHA 6' spacing requirement. Our unique design allows the flags to pivot on the cable which allows for less wind resistance. The system exceeds OSHA regulations for warning line systems. Perm-Line is not a motion stopping device.
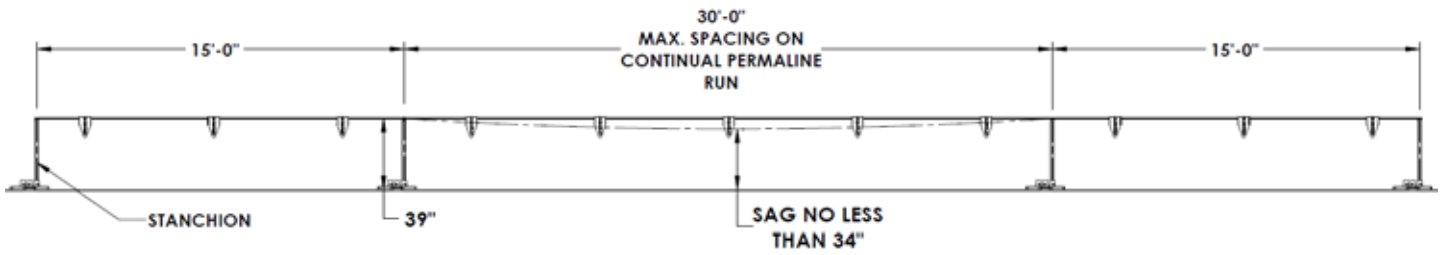

## FEATURES

- Non-penetrating system
- When used on conjunction with SafteyRail 2000, it will reduce the costs of the fall protection project
- Exceeds OSHA regulations for warning line systems
- Power Coat Yellow and Galvanized Finishes available

## OSHA COMPLIANCE

Fully compliant with all OSHA standards.

# EASY INSTALL

Similar to our non-penetrating safety solutions, Perma-Line is easy to install. Once in place, it also requires very little ongoing maintenance.
